

PureBiotic

Probiotic to Restore Gastrointestinal Balance*

Designed for a complete intestinal repopulation of upper and lower intestines with **27 billion cultures from 13 different clinically supported strains** per serving. This advanced probiotic formula is used to repopulate the intestinal bacteria in those with poor B-vitamin production, antibiotic use, fungal infections, constipation, diarrhea, GERD, IBS, Crohn's disease, and Ulcerative colitis. It can be used to protect the gut against infections during travel and antibiotic use.

Specific special features include:

- **Saccharomyces Boulardii**, which adheres to pathogens such as E.coli and Clostridium difficile to immobilize or excrete them. S. boulardii is unique non-binding beneficial yeast that does not adhere to the intestinal wall and is able to survive the gastric acidity and provides competitive growth inhibition.
- **Bifidobacterium and Lactobacillus**, which are known to adhere to the intestinal epithelial cells providing a natural barrier and reducing pathogens' adhesion ability. They are also known to increase immune function and to act as natural antibiotics to kill undesirable microbes. This formula was also designed to improve lactose intolerance and digestibility of milk products.*

Directions:

Take three capsules daily in divided doses with meals.

Supplement Facts:

Serving Size: 3 Vegetarian Capsules

Servings Per Container: 30

Three Capsules Contain:

Bifidobacterium bifidum	- 12 billion
Lactobacillus acidophilus	- 4.8 billion
Lactobacillus rhamnosus	- 2.2 billion
